Senior Business Analyst with 5+ years of experience delivering business and system analysis within high-availability transaction processing environments. Proven expertise in eliciting and documenting complex business requirements (BRDs, FDDs, RTMs), conducting fit-gap analysis, and ensuring end-to-end solution alignment across business, operational and technology teams. Strong background in Agile/Scrum delivery, stakeholder workshops, discovery assessments, UAT coordination, and solution validation. Analytical and structured problem solver with a strong customer focus, adept at navigating ambiguity, managing parallel change programs, and driving structured requirement lifecycle management across the SDLC.

Key Skills

Core Competencies: Agile Business Analysis, Requirement Lifecycle Management, Fit-Gap Analysis, Product Roadmaps & Feature Prioritisation, UAT & SDLC Governance, Backlog management, Workflow & System thinking.

Transferable: Stakeholder Management, Communication, Critical Thinking, Problem-Solving, Risk Assessment, Quick Learning, Cross-Cultural Collaboration, Client Management, System Integration testing.

Tools and Methods: Agile/Scrum, Jira & Confluence, Microsoft Office Suite, Python, Power BI, SQL (Data Analysis & Validation), Gherkin Format, API Testing & Validation.

Professional Experience

IBS Software Ltd – Senior Product Analyst
Cochin, India | Jul 2023 – Sep 2025

- Led end-to-end business analysis activities across Freight & Logistics software covering Cargo Reservations, Bookings, Pricing, Flight Planning, Warehouse Planning and IATA-based operations modules within a high-availability transaction processing environment.
- Elicited, analysed and documented business and system requirements through stakeholder workshops, producing BRDs, FRDs, RTMs, process maps, workflow diagrams, use cases and functional specifications.
- Partnered with business, operational and technology stakeholders to understand business context, regulatory requirements (IATA standards) and system constraints, ensuring clear problem definition and solution alignment.
- Supported 4 major product releases, managing 15+ change requests, 40+ production incidents and performance enhancements through structured impact analysis and requirement refinement.
- Played a key role in a large-scale European client upgrade program, conducting fit-gap analysis, managing 300+ system gaps and customisations, ensuring traceability from requirement through solution delivery.

- Collaborated closely with Scrum teams (architects, developers, QA) to clarify requirements, review proposed solutions, resolve ambiguities and ensure adherence to strategic technology goals.
- Designed and validated end-to-end business process flows, data models and API integrations; performed SQL-based data validation and solution testing to ensure requirements were accurately implemented.
- Supported discovery and pre-sales phases by conducting high-level assessments, scope definition, estimation inputs, and upgrade scope freezing aligned to client business objectives.
- Led UAT and Production Acceptance Testing (PAT), prepared test scenarios, coordinated defect management, maintained requirement traceability and ensured successful client sign-off.
- Produced and maintained structured project documentation including configuration guides, user manuals, access documentation and knowledge transfer materials to support operational readiness.

Tata Technologies Ltd – Business Analyst – Program Delivery
Pune, India/Hanoi Vietnam | April 2021 –Jul 2023

- Identified delivery risks and dependencies across EE components for B- and C-segment EV programs by analysing build plans, gateway milestones, and supplier inputs.
- Structured program plans and trackable deliverables by breaking down complex EV development timelines aligned to customer and PLM gateway releases.
- Coordinated cross-functional stakeholders (engineering, manufacturing, purchasing, suppliers) to maintain alignment on scope, timelines, readiness, and engineering changes.
- Improved release readiness and execution visibility by tracking risks, action items, and program documentation, while collaborating directly with customer teams during reviews and on-site engagements.
- Proactively identified and mitigated risks by addressing build issues through IMS-JIRA and ensuring ECR and DCR implementation met target build plans.
- Conducted post-release and post-build reviews to drive continuous process improvements, focusing on lead time reduction and efficiency enhancement.
- Created and maintained reports using Microsoft Excel, analyzing data to track daily progress, identify bottlenecks, and provide actionable insights for process improvements.

Education

MSc Business Analytics (In Progress) – Dublin City University, Ireland (Graduating Jul 2026)

Predictive Score – 2.1 | Advanced Analytics & AI, Strategic Thinking and Leadership, Programming & Statistics

B. Tech in Mechanical Engineering – A P J Abdul Kalam Technological University, India (2020)

Achieved First Class/1.1

Certifications:

- Certified Scrum Product Owner® (CSPO)
- IBM Enterprise Design Thinking Practitioner

Volunteering & Additional Experience

- Volunteer – Flood Relief & Coordination Activities - Collaborated with **local authorities and volunteer groups** to organise rescue operations, manage relief camps, and streamline communication between teams.
- **Volunteer Data Collection** – Supported Pradhan Mantri Awas Yojana (PMAY) housing scheme by collecting and structuring social project data.

Interests

Hiking | Volunteering for social causes | Creative problem-solving | Exploring new technologies.
